# Sustainable Town Planning Study Program SINGAPORE

30 October - 3 November 2017

#### **Objective**

The aim of this program is to provide a practical and informative guide to enrich participants on how Singapore designs, and implements her master plan for urban development. It is useful for governments and communities to meet the challenges of land use needs with attention to enhancing the quality of life. Cities which suffer from overcrowding, poor living conditions and a lack of infrastructure can be transformed into liveable cities through identifying factors that can be adopted from your study of Singapore.

Various site visits and interactive sessions with respective authorities provide valuable insights into how actual work gets done and how the different government or private sector agencies are co-opted into implementation and execution. By the end of the program, participants would have established a solid understanding of the fundamental that go into the making of a well planned city and be able to translate these insights to further their national plans.

## The Singapore Planning Study Series

This Study Program offers a series of study tours by Activistar to engage overseas participants in the planning and development of Singapore's urban solutions. Beginning with an overview study of Singapore's sustainable city planning, this is followed by major chapters including sustainability in public housing, transportation, water, conservation, development of industrial zones, commercial sectors, tourism and greening of the city.

Very interesting and informative program to study ~ Yari Kabir, President of Nigerian Institute of Town Planning. UN-Habitat Program Manager

Bank: DBS Bank Ltd, DBS Asia Central
Swift Code: DBSSSGSG

### Why travel to Singapore to study town planning instead of other cities?

Singapore is a model case study in macro and micro town planning. It is a city state that can be emulated in any other city since it encompass everything within its boundaries and they can be studied within a week due to its size.

The Green City Index conducted by Economist Intelligence Unit (EIU) rates Singapore as the only city that is Well Above Average. Clearly, appointing Singapore as a model city to study: Click here.

A practical training program that the knowledge learnt can be applied to in my city ~ Esther Yong, Asst Professor Hong Kong Polytechnic University
